

THE NEXT STEP FORWARD FOR SILAGE GROWERS

DKC2684 A high output early/maincrop maize for biogas and livestock production

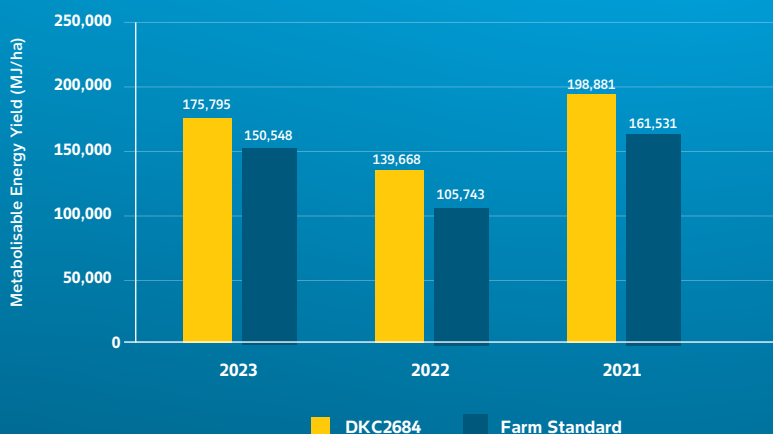

Source: MD trial site 2024

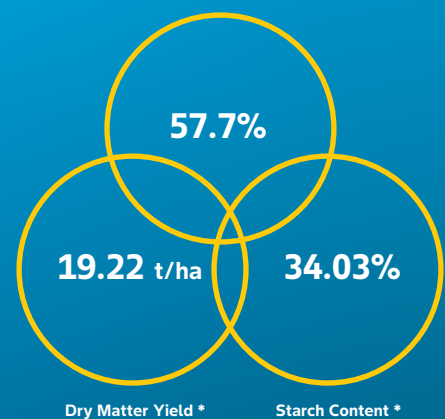

- High DM yields with early/maincrop maturity for maximum output across a range of environments.
- Flint to flint-dent grain for the best combination of fermentable energy and agronomics.
- High starch content and good cell wall digestibility for the highest metabolisable energy yields.
- Good vigour for rapid and reliable establishment regardless of sowing date.
- Good resistance to root and stalk lodging for reliable performance.

Performance in Three Years of Farm Trials

Cell Wall Digestibility *

* Average performance from 5 site Bayer Maize Replicated Trials (2022, 2023 & 2024)
